Digital Gallery

Teju Kolawole

My end goal is to create a website that stores personal projects of mine with an easy to understand UI.

## Summary

I have made a website before so I want to see what I can do in order to innovate what i was able to do.

Two things that I want to try is customizing the look of the website more and also having a changelog that

that shows all the different updates implemented.

## Challenges to Complete

1. I've done websites before so I would like to make something that surpasses them
2. I would like to implement a changelog that shows the updates made to the website

## Week-by-Week

- Week 3: Come up with the basic skeleton of the website.
- Week 6: Set the style of the website
- Week 9: Come up with the changelog showing the different updates

## List of Issues We Will Face

The only major issues I think I will face is being somewhat unfamiliar with javascript.

## Technologies to Use

- HTML
- CSS
- Javascript
- Python
